

## **Disclaimer**

**This PowerPoint contains  
Confidential information.**

**Do not circulate this or tell  
patients they might have COVID  
19 from this test.**

**Just use it to optimise your and  
your patient's immune system.**

**Discovering how to test  
for COVID 19**

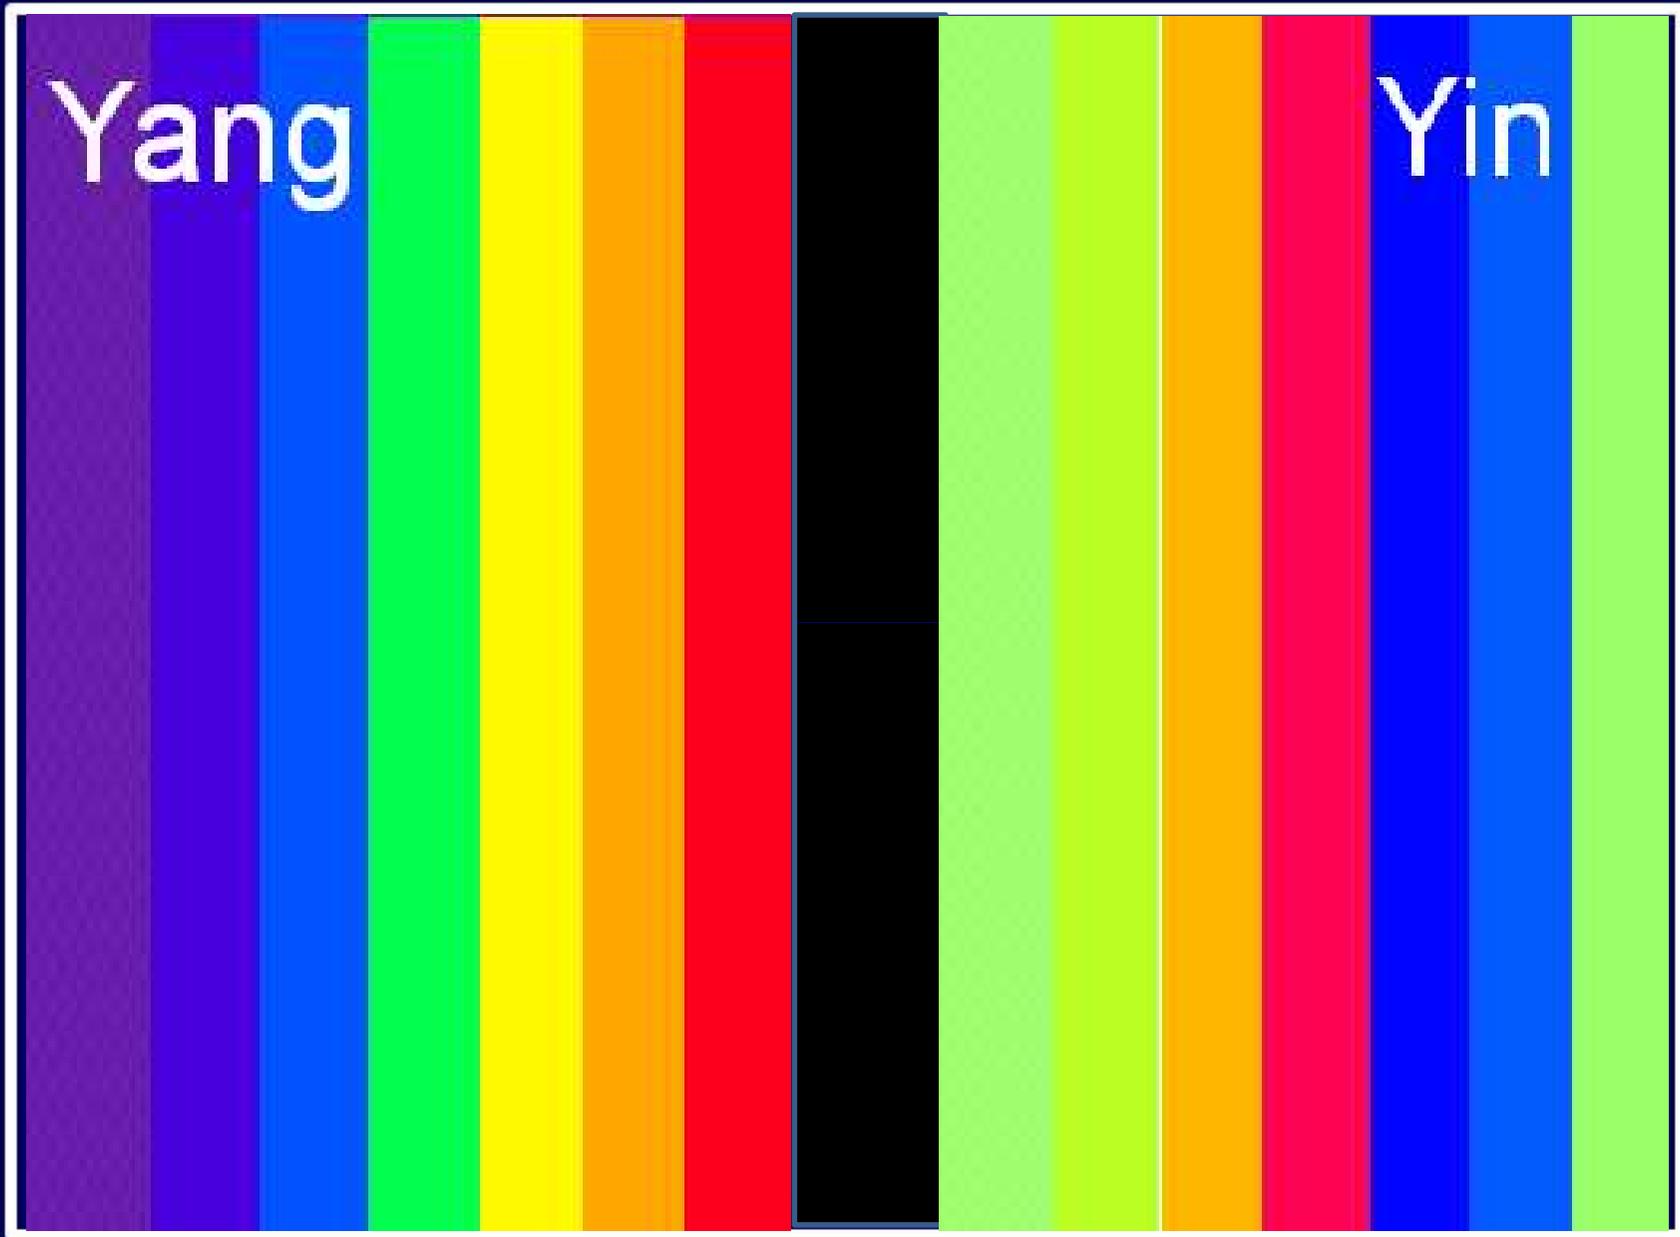

**First make sure the patient is fully neurologically organised.**  
(Most Epigenetic's practitioners are familiar with this technique. If so jump to slide 8 but remember you must make sure that the patient is neurologically organised before the COVID19 testing.)

Using the composite acetates test  
Yang / Yin with eyes closed.  
Then test each separate meridian  
to identify **Causal meridian.**

**Effect meridian** is the one that  
negates this meridian.

Yang

Yin

**Maintain causal meridian acetate and tap SCN point 60x at 2Hz. This will lock the patient into the causal meridian.**

**The Effect meridian will negate the Causal meridian and now will weaken in the clear.**

There will be **weak associated muscles** on both meridians found.

If all associated muscles not weak  
shine UV light\* (obtainable from Epigenetics Ltd)  
into Glabella for 20 seconds. Most  
important.

All associated meridian muscles  
now test weak and the patient is  
now **fully neurologically organised.**

## **Spectroscopic emission**

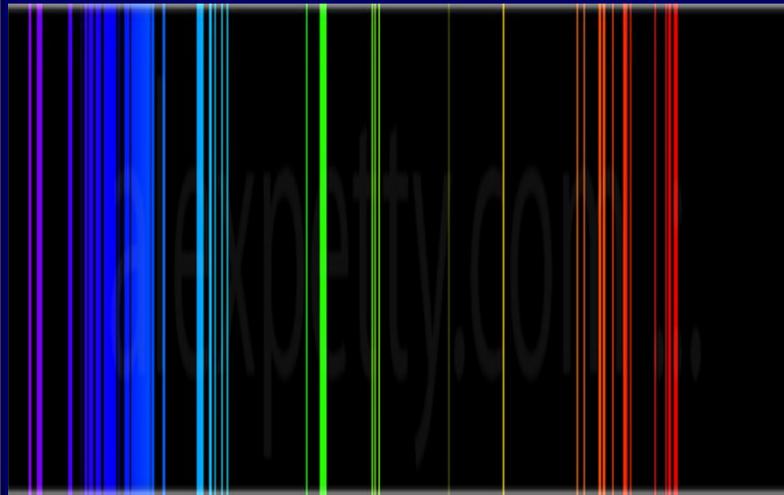

Every living and non-living compound whether organic or not emits a **spectroscopic emission** when heated.

We see this when the orange street lights are turned on at dusk.

These lights contain **sodium** gas which has a spectroscopic emission like this –

Sodium Spectroscopic emission

But the human eye sees this

However when all these different colours are layered together we humans see the **bright orange glow** when the light is on, which can be measured as a single monochromatic emission.

The human eye perceives light from the **violet** end of the spectrum at 385nm to the **red** end of the spectrum at 645-770nm.

**My finding is that **COVID 19**  
spectroscopic emission is at  
633nm in the orange spectrum.**

**You can print this off either on paper or best on an acetate sheet. If on paper  
place it coloured side down on the patient or patient looks at it.. This acetate is  
now available from Epigenetics Ltd [www.epigenetics-international.com](http://www.epigenetics-international.com)**

Thus if a patient **weakens** in the clear to this specific coloured acetate you can say that they might currently have COVID19.

But of course never base a diagnosis on this finding alone.

You must follow government guidelines in such a case.

I have tested this remotely using hair samples of known cases of COVID 19 and they weaken in the clear if the **virus is (still) active.**

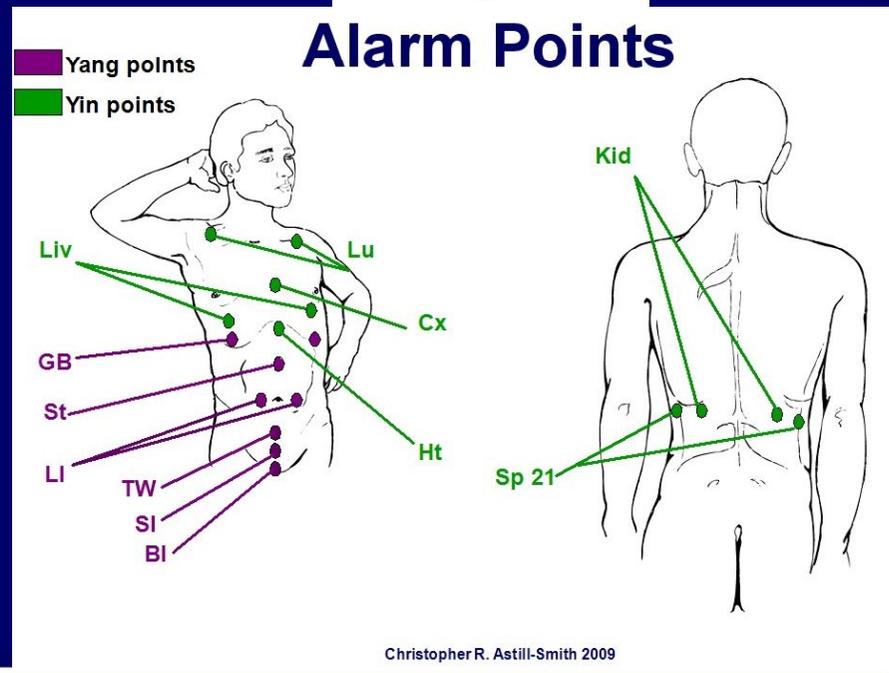

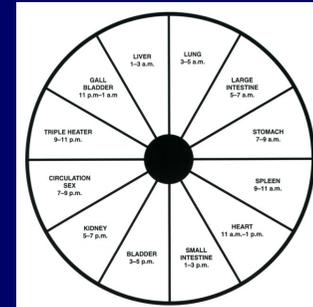

**Most people do not weaken in the clear to this acetate as they are currently not infectious.**

**However most people who do not weaken in the clear weaken when the acetate is challenged whilst therapy localising the current **WON time point.****

# The **WON time** point is the coupled meridian's **ALARM** point to the **NOW time**.

NOW time                      WON time

Lung	4-6am	LI
LI	6-8am	Lung
St	8-10am	Sp
Sp	10-12midday	St
Ht	12-2pm	SI
SI	2-4pm	Ht
BI	4-6pm	Kid
Kid	6-8pm	BI
Cx	8-10pm	TW
TW	10-12midnight	Cx
GB	12-2am	Liv
Liv	2-4am	GB

BST Summer times

If the Alarm point is **bilateral**  
Therapy Localise both sides.

**This does not mean they have  
COVID19 but if they were  
exposed to it you can find what  
will optimise their immune  
system against it.**

From **this weakness** you can now discover exactly what the individual requirements are to improve immunity against the virus. e.g.

**Liposomal Vitamin D3**

**Zinc SA**

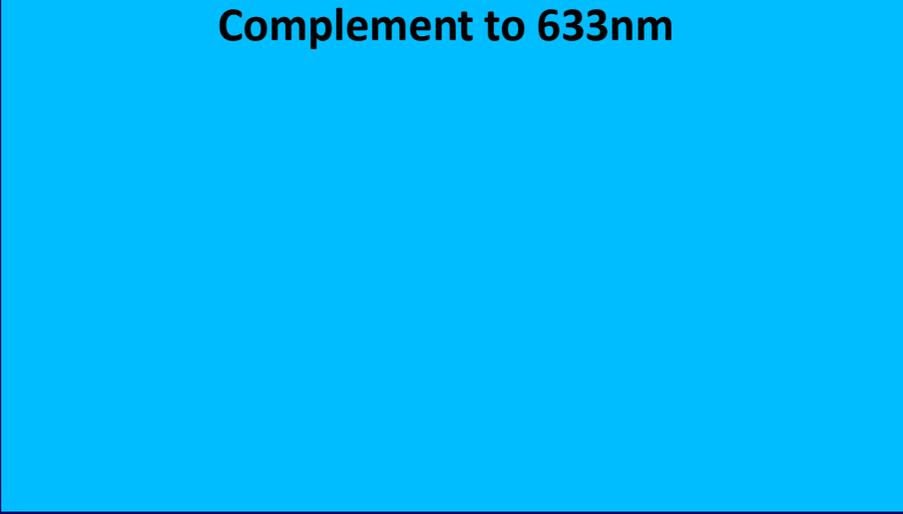

**Vitamin C (Sodium ascorbate tends to test best and Potassium ascorbate during infection)**

**Probiotics, Coconut oil**

All products and test vials available from [www.epigenetics-international.com](http://www.epigenetics-international.com)

**I wonder if the complimentary  
colour would be therapeutic if  
used as light therapy also ??**

**Complement to 633nm**

**This acetate is now available from Epigenetics Ltd**

**[www.epigenetics-international.com](http://www.epigenetics-international.com)**

**Use a strong torch light through the acetate to the Thymus / Spleen area.**

## **Chapman's Reflexes**

**Dr Goodheart integrated these reflexes into Applied Kinesiology using the Organ / Muscle / Meridian connection. They stimulate the organs lymphatic drainage and this is of special importance at this time in relationship to optimising the immune system.**

# The Immune System

**Thymus**                      **Infraspinatus**                      **TW**

**Spleen**                      **Latissimus dorsi**                      **Sp**

**Middle Trapezius**                      **Sp**

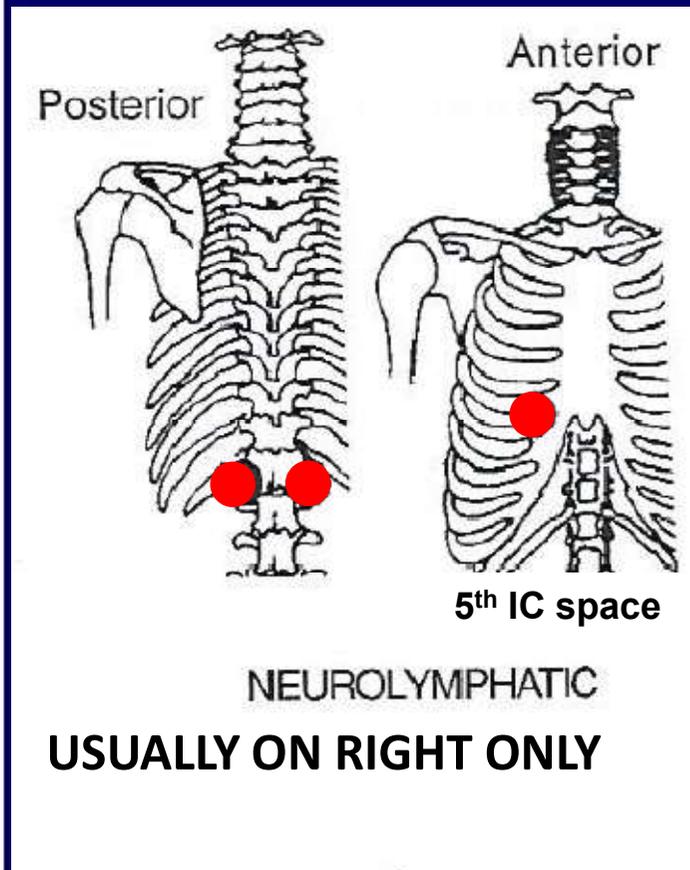

**Lower Trapezius**                      **Sp**

**Triceps**                      **Sp**

# Chapman's Reflexes Points

## Thymus

## Spleen

**Remember that blood flows through all our organs every few minutes.**

**Rubbing the Neurolyphatic reflexes decongests the organ enabling it to carry out it function.**

Thoughts on the COVID19 Outbreak by Walter Schmitt D.C. and Kerry McCord D.C. Facebook 18<sup>th</sup> March 2020

**The Thymus** is a specialised primary lymphoid organ of the immune system. Within the thymus, T cells mature. T cells are critical to the adaptive immune system.

**The Spleen** is similar in structure to a large lymph node, it acts primarily as a blood filter.

These **immune reflexes** must be rubbed for at least 2 minutes and up to 4 minutes to achieve optimal effects.

Patients may be instructed to rub the anterior reflexes at home daily.

Thoughts on the COVID19 Outbreak by Walter Schmitt D.C. and Kerry McCord D.C. Facebook 18<sup>th</sup> March 2020

**Cut sugar out of your diet. Sugar—all kinds of sugar—suppresses the immune system, and we certainly do not want to suppress our systems right now.**

**Acidify your gut. Pathogens cannot survive in an acidic medium. Drink 1–2 tablespoons of apple cider vinegar every day. If you take it before meals, it will also help you digest your food. Also include cultured dairy in your diet. Good-quality plain, full-fat organic yogurt made from grass-fed milk or kefir can provide lactic acid to your digestive tract. If you can't handle dairy, eat fermented foods, which are also high in lactic acid. And lots of them!**

**Eat pastured eggs, especially the yolks. You need the cholesterol.**

**Make chicken soup. Chicken meat stock. Also suck out the marrow from the bones. Add some good sea salt and lots of fresh pressed garlic cloves to every cup of stock, along with some ghee, tallow, coconut oil, or coconut milk if you have it. (Garlic is specific to the respiratory system, and the lauric acid in coconut milk is an immune booster.)**

**Fermented cabbage, aka sauerkraut and other fermented foods, provide high levels of the whole vitamin C complex your body needs and Vitamin K2. Fermented foods also provide beneficial microbes .**

**Copies of the two acetates are  
available from Epigenetics Ltd.  
online at  
[www.epigenetics-international.com](http://www.epigenetics-international.com)**

A solid orange square.

**633nm**

A solid light blue square.

**Complement to 633nm**

**Do let me know your findings so  
we can share them between us  
for our benefit, our families and  
to our patients.**

**Keep well**

*Chris*
